

# ***SOUTH CAMERON FIRE DEPARTMENT***

***CHIEF TIM DUPONT***

On March 14th, 2025, at approximately 1:00 PM, the South Cameron Fire Department will host a live Liquefied Natural Gas (LNG) Burn training at the Cameron Recreation Center. This event promises to be both educational and engaging, as firefighters from South Cameron and the Grand Lake Fire Departments will participate in this vital training session, guided by expert instructors from the renowned Texas A&M Fire Engineering Division. This unique opportunity allows the public to witness firsthand how our fire professionals are trained to handle LNG safely and effectively. It is crucial for our community to understand the safety measures in place and the skills our firefighters acquire to protect us all.

This training is made possible through a partnership with Venture Global LNG, reflecting a commitment to safety and collaboration within our community. We invite everyone to attend and observe as our brave firefighters enhance their skills in managing LNG-related incidents. This event is not only a testament to their dedication but also a chance for community members to engage with local emergency services.

We encourage all residents to mark their calendars for this important event. Together, let us support our firefighters and learn more about the safety protocols that keep our community safe.
