

- NOTICE -
United States Airforce Reserve
Mosquito Spraying October 7-10

The United States Airforce Reserve (USAFR) will be conducting an IRT (Innovative Readiness Training) mission over a four-parish area, including portions of Cameron Parish, in conjunction with the mosquito abatement districts in each parish. The public may see a large military aircraft at low elevations during the nights between October 7-10 beginning around sunset. The USAFR will be using Dibrom supplied by Cameron Parish Mosquito Abatement. Dibrom is approved by the EPA for use in residential areas and is the same product used in the flights performed with the Cameron Parish Mosquito Abatement's airplane.
