

Committed to Cameron Parish

At Semptra Infrastructure we develop, build, operate and invest in modern energy infrastructure that is expected to play a crucial role in the energy systems of the future.

Championing economic prosperity and leadership development

Southwest Louisiana leads the way in energy infrastructure and innovation. That's why we've been investing in this area for over 20 years now.

Semptra Infrastructure owns a majority interest in Cameron LNG, a 12 Mtpa natural gas export facility operating in Hackberry. We are currently constructing Port Arthur Pipeline Louisiana Connector and LA Storage Hackberry, which together will support additional U.S. LNG export infrastructure. We are also developing the proposed Hackberry Carbon Sequestration (HCS) project, a facility designed to receive and store CO₂ from multiple sources.
